Art Unit: 3753

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 6-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Smith

(3,417,775). Smith shows a blind-end barrel 36 having a water outlet 35, 39, and a resilient sleeve 42 that expands away from the water ports. The housing 17 has elongated air vents in the wall with cross bars across the air vents defining a plurality of air vents. The sleeve engages these vent when expanded. The title "educator" has been given no weight because there is no educator structure recited anywhere in the claim.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 6-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Beldham et al. in view of Smith or vice-versa. Beldham shows an anti backflow educator with a blind-end barrel with water ports 22, a resilient sleeve 26, and elongated air ports 42. Note downstream educator 14. It would have been obvious to provide the Beldham air ports with cross bars as shown by Smith to increase the strength of the outer housing. Alternatively, it would have been obvious in view of Beldham to place an educator downstream of the Smith siphon breaker to permit fluid mixing.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Fillman and Johnson show devices very similar to Smith.
